Helix Centre

Front End Developer

The Helix Centre team works at the heart of healthcare delivery to build and scale solutions that reimagine healthcare. Founded by Imperial College London and the Royal College of Art, and based in a busy London hospital, at the core of what we do is a drive to make a real and lasting difference to the lives of patients and healthcare professionals through design, technology and clinical research.

As a Front-End Developer on the Helix Centre team, you will report to the Head of Technology and work as part of a small, multi-disciplinary team. You will be responsible for the development of applications by working with designers to get products to MVP stage.

At Helix we often build new solutions from very early stage ideas and without fully-specified product definitions. We need our developers to be engaged in the product development process, enthusiastic about working closely with designers and clinicians, and comfortable quickly prototyping solutions and seeking feedback to move product development forward.

The ideal candidate is an experienced professional with a high level of technical expertise. Specifically we are looking for:

A front-end developer with backend understanding;
- Substantial experience with different programming languages and frameworks;
- An eagerness to play with new technologies and a good enough developer to do that quickly;
- An ability to work collaboratively with designers and an eye for detail in creating pixel perfect translations from Photoshop / Illustrator / Sketch layouts.

This is a great opportunity for an individual to develop innovative products in healthcare that both improve people's lives and set the bar high for creativity and quality.

The post will be full-time and fixed term for one year and will be based at the St Mary's Hospital campus, offering a competitive salary, with potential for renewal. Imperial College operates generous benefits and is open to flexible models of working.
